

Engineering a Continuous Career Operating System

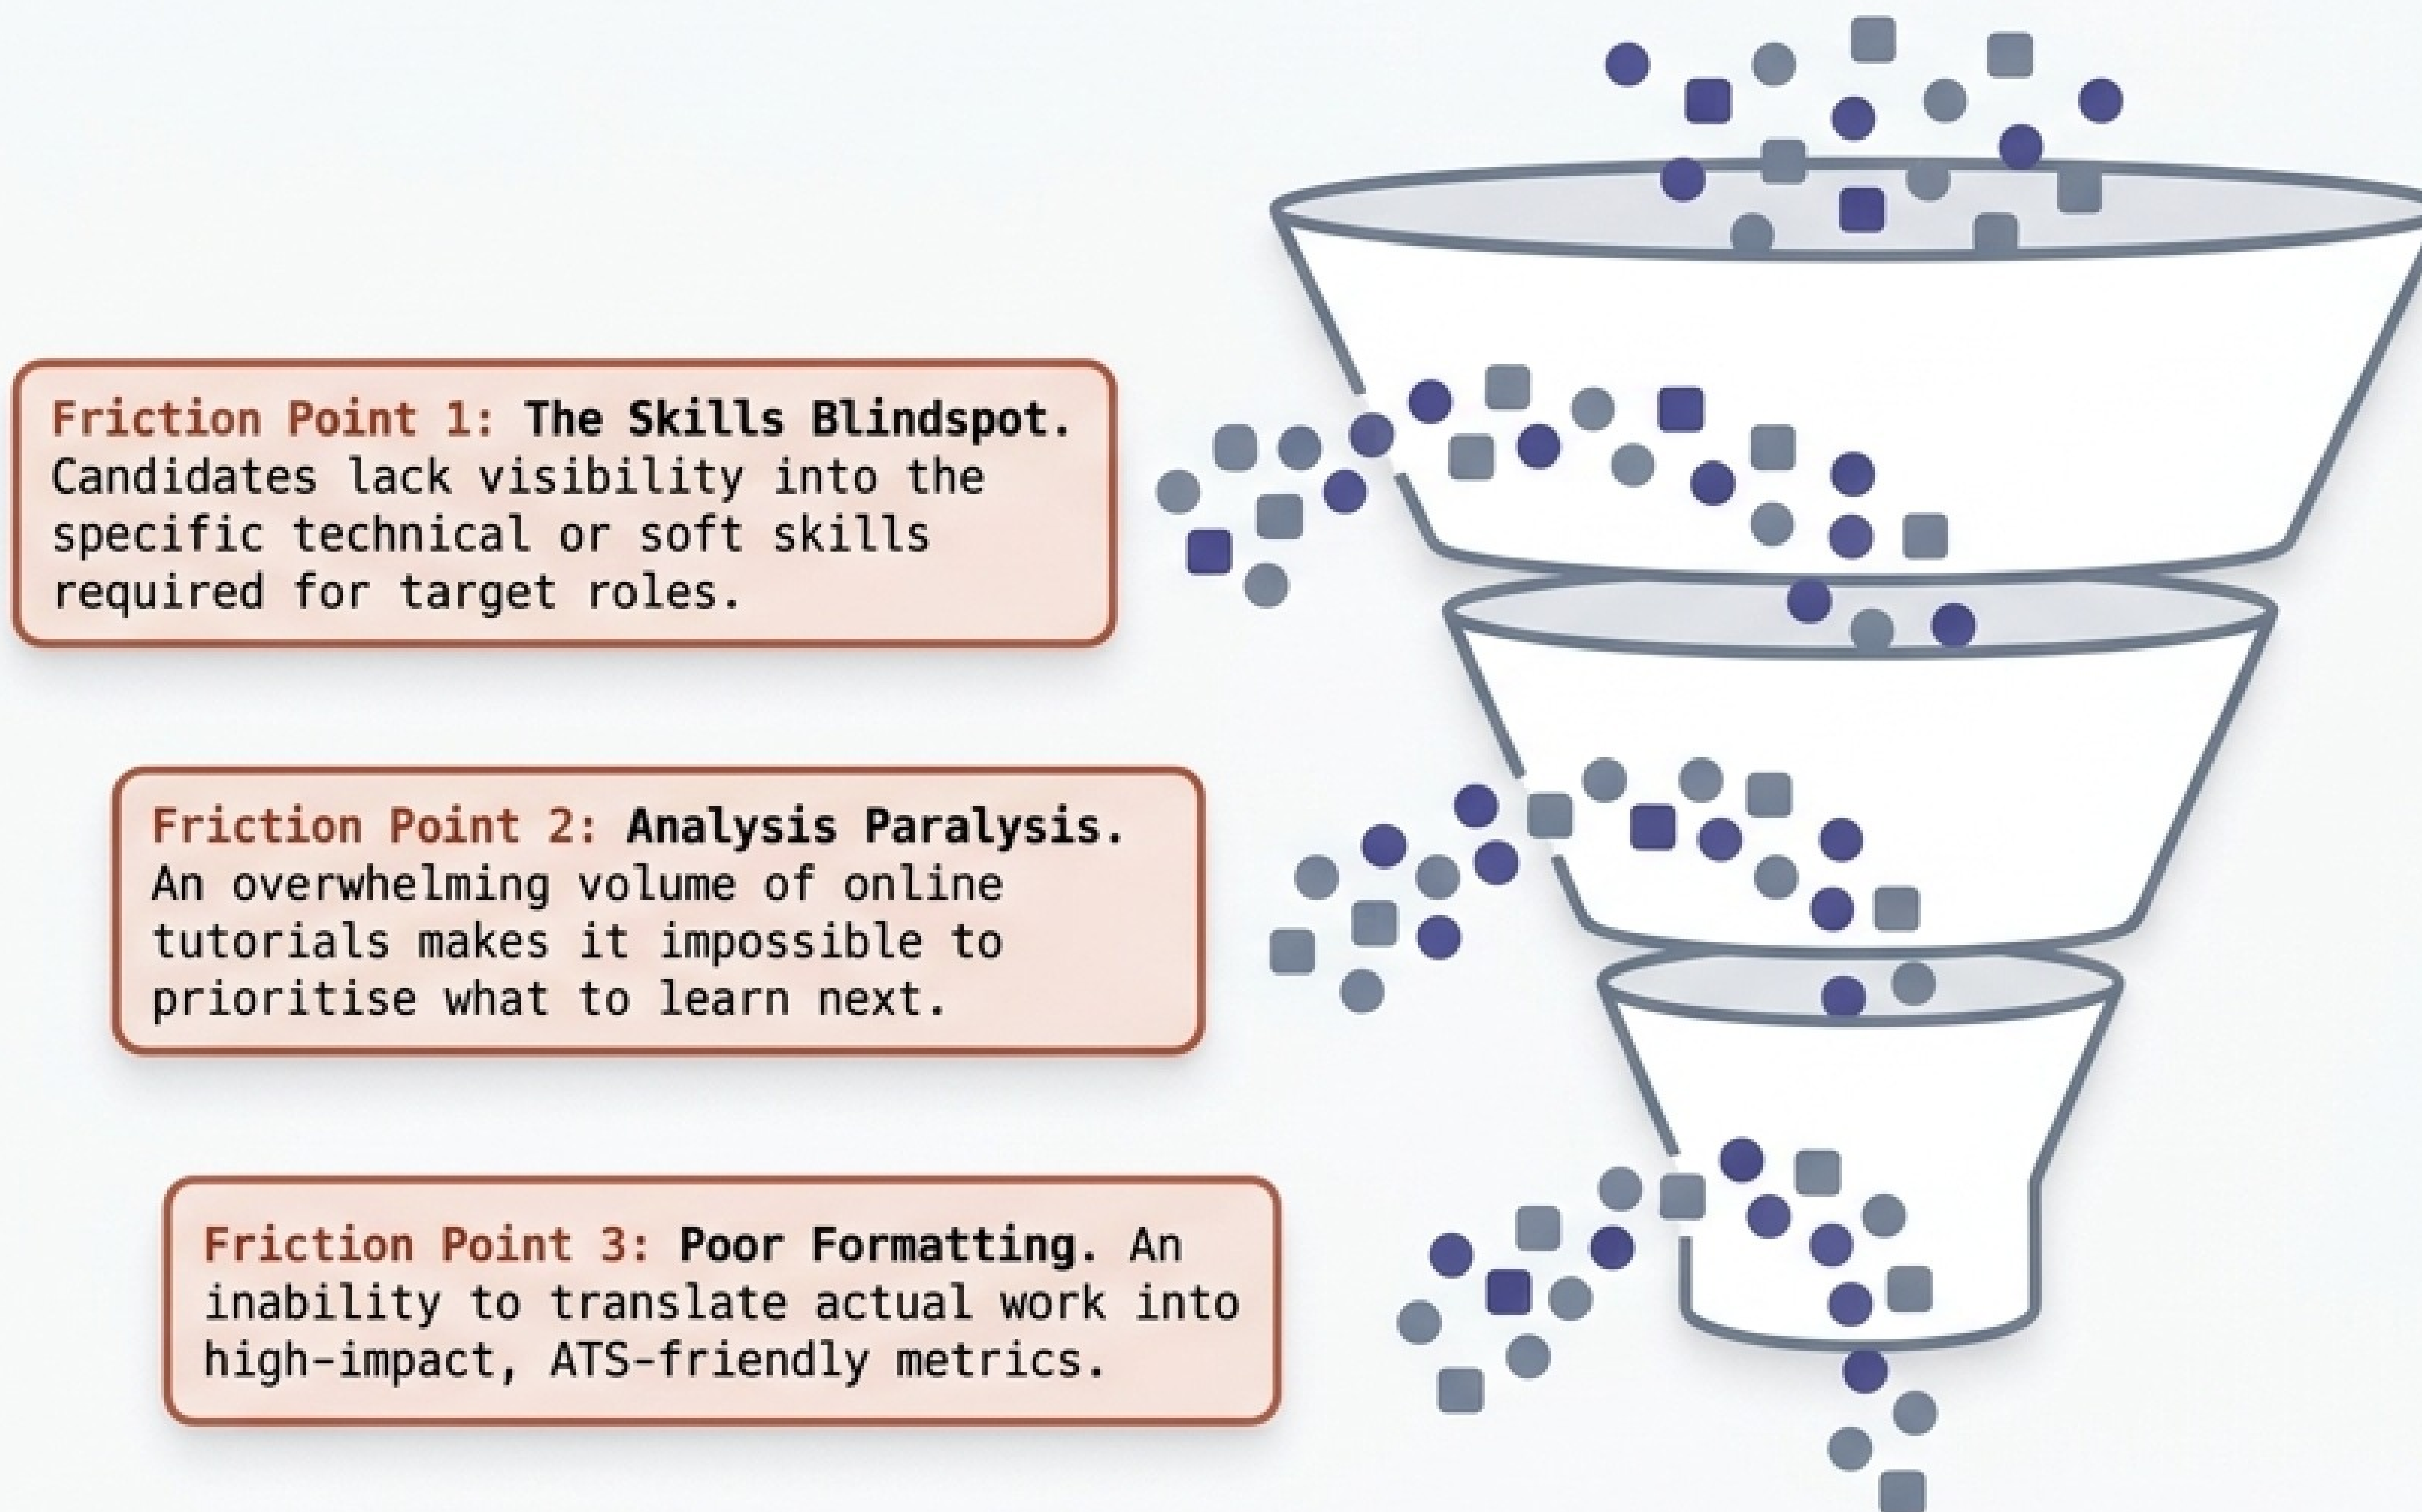

Product: GetMeTheJob

Document Type: Product & Engineering Case Study

Architect: Harshit Gupta (Enrolment: 24113053)

The Candidate Friction Model

The modern tech job market requires structured data to pass ATS filters, but candidates operate with chaotic, unstructured profiles.

Moving Beyond the Static Resume

Traditional Builders

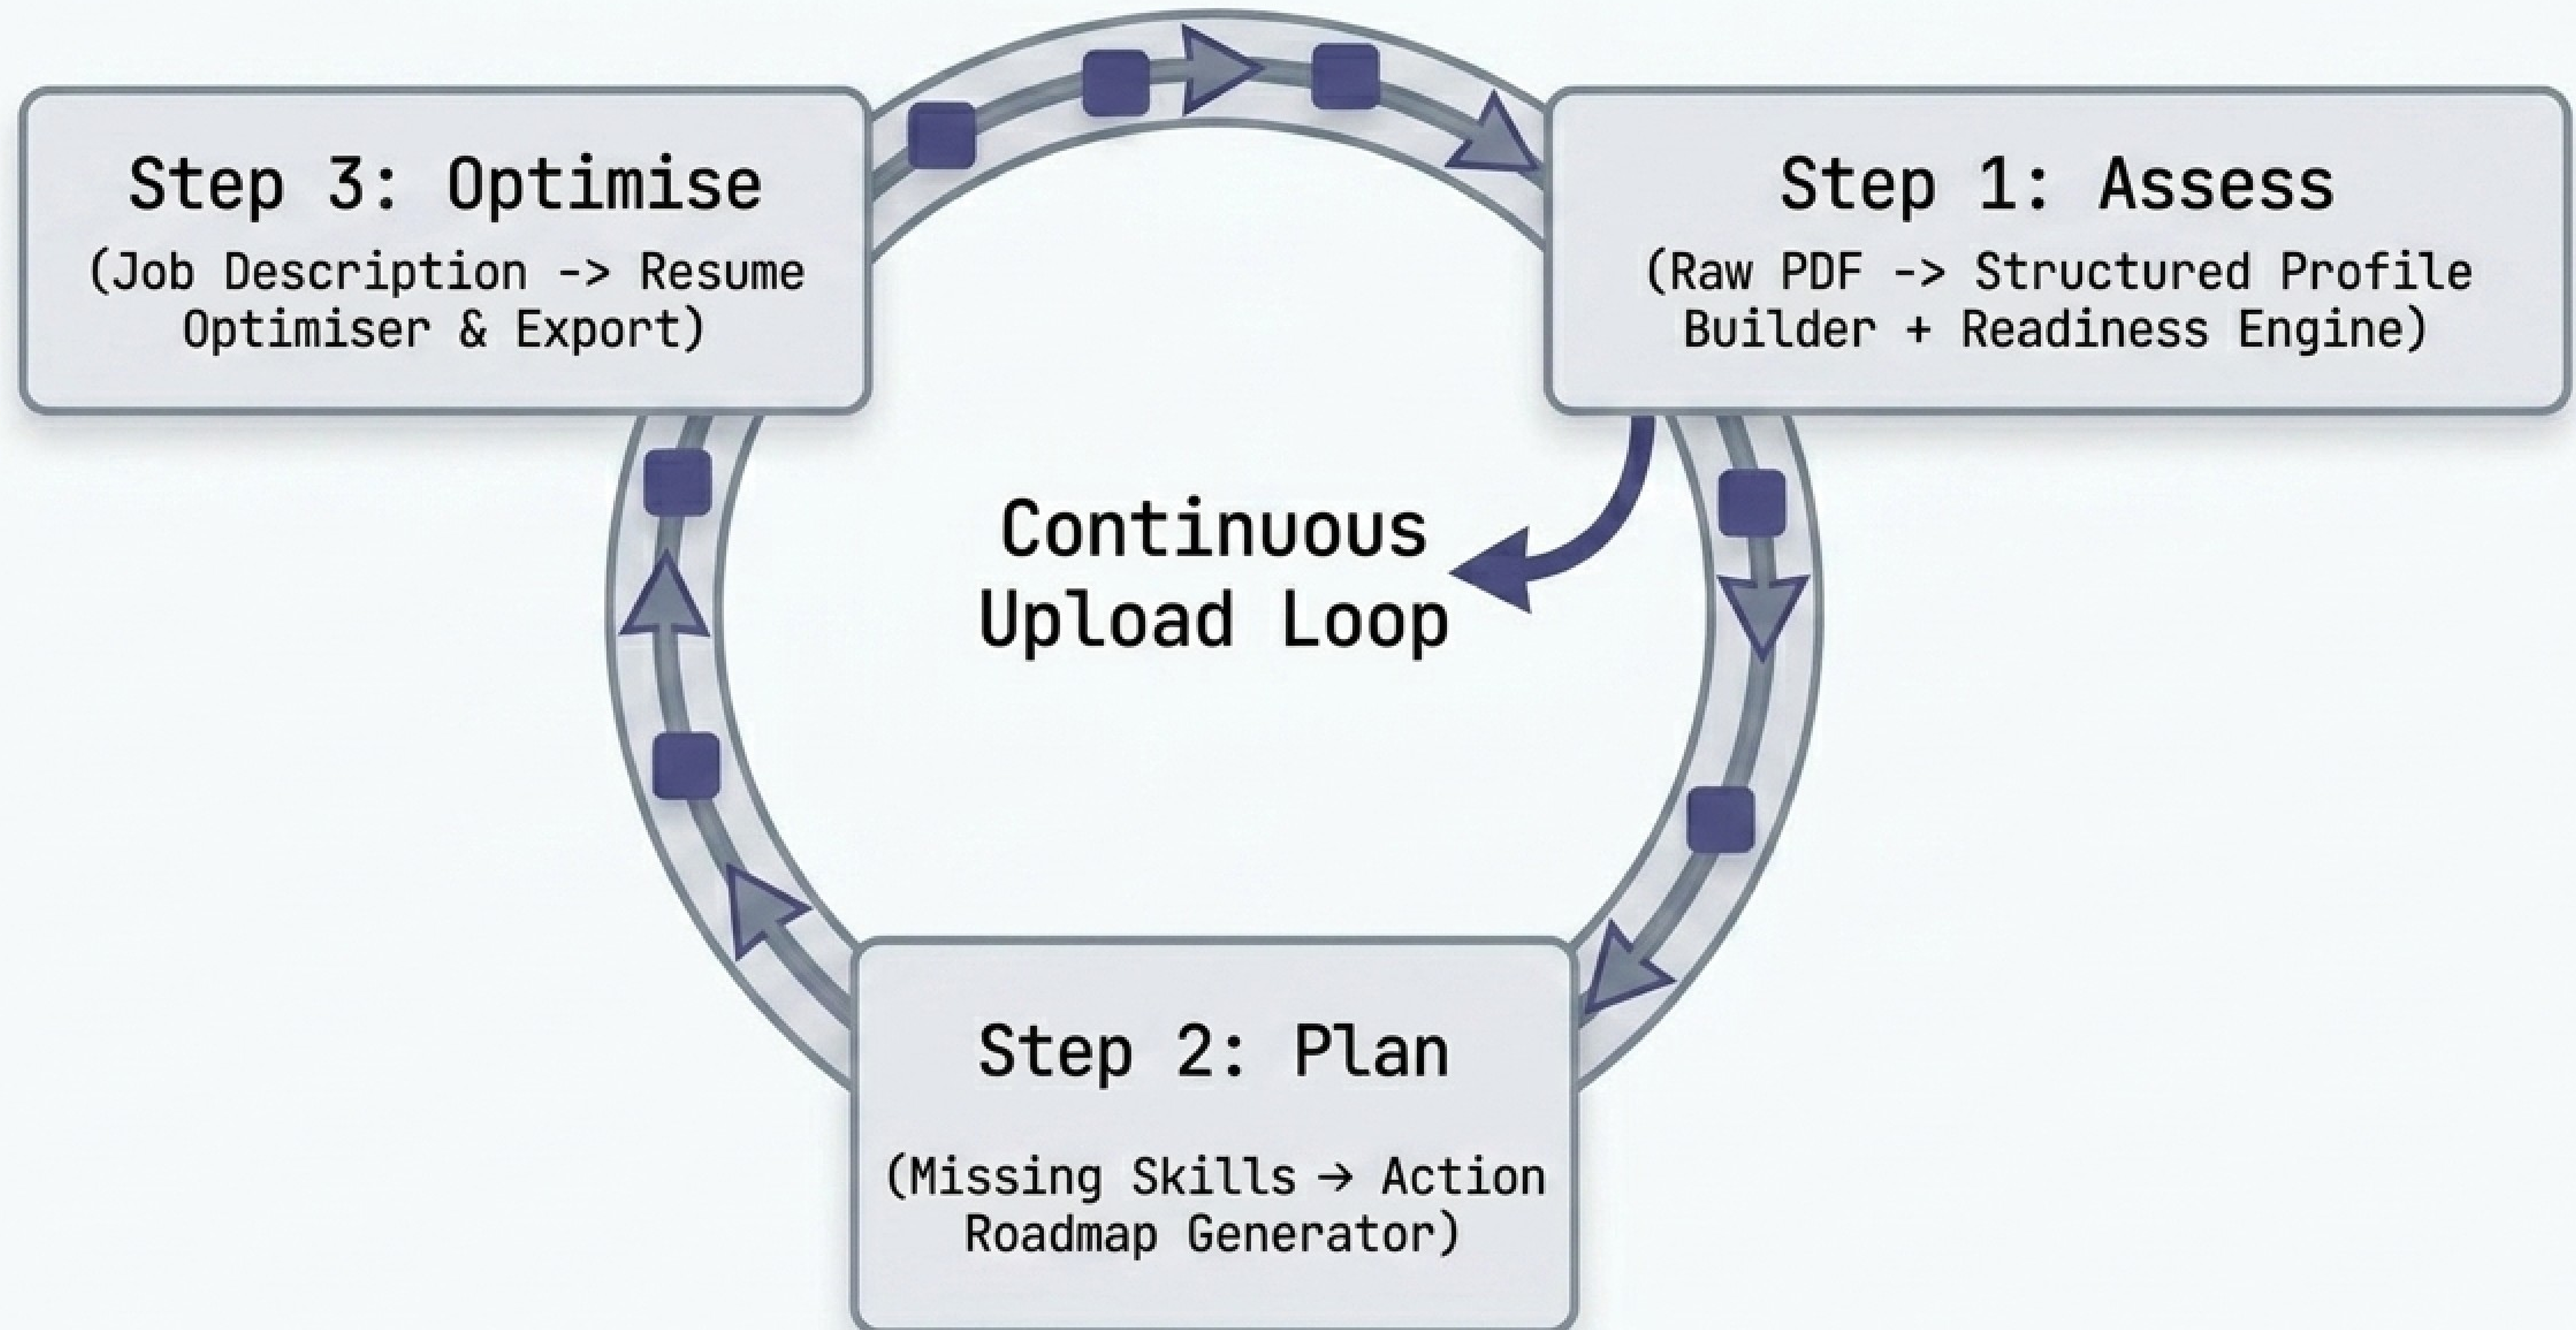

- Format: Static, one-shot PDF generation.
- Logic: Template-driven layout adjustment.
- Lifespan: Abandoned after download.

GetMeTheJob

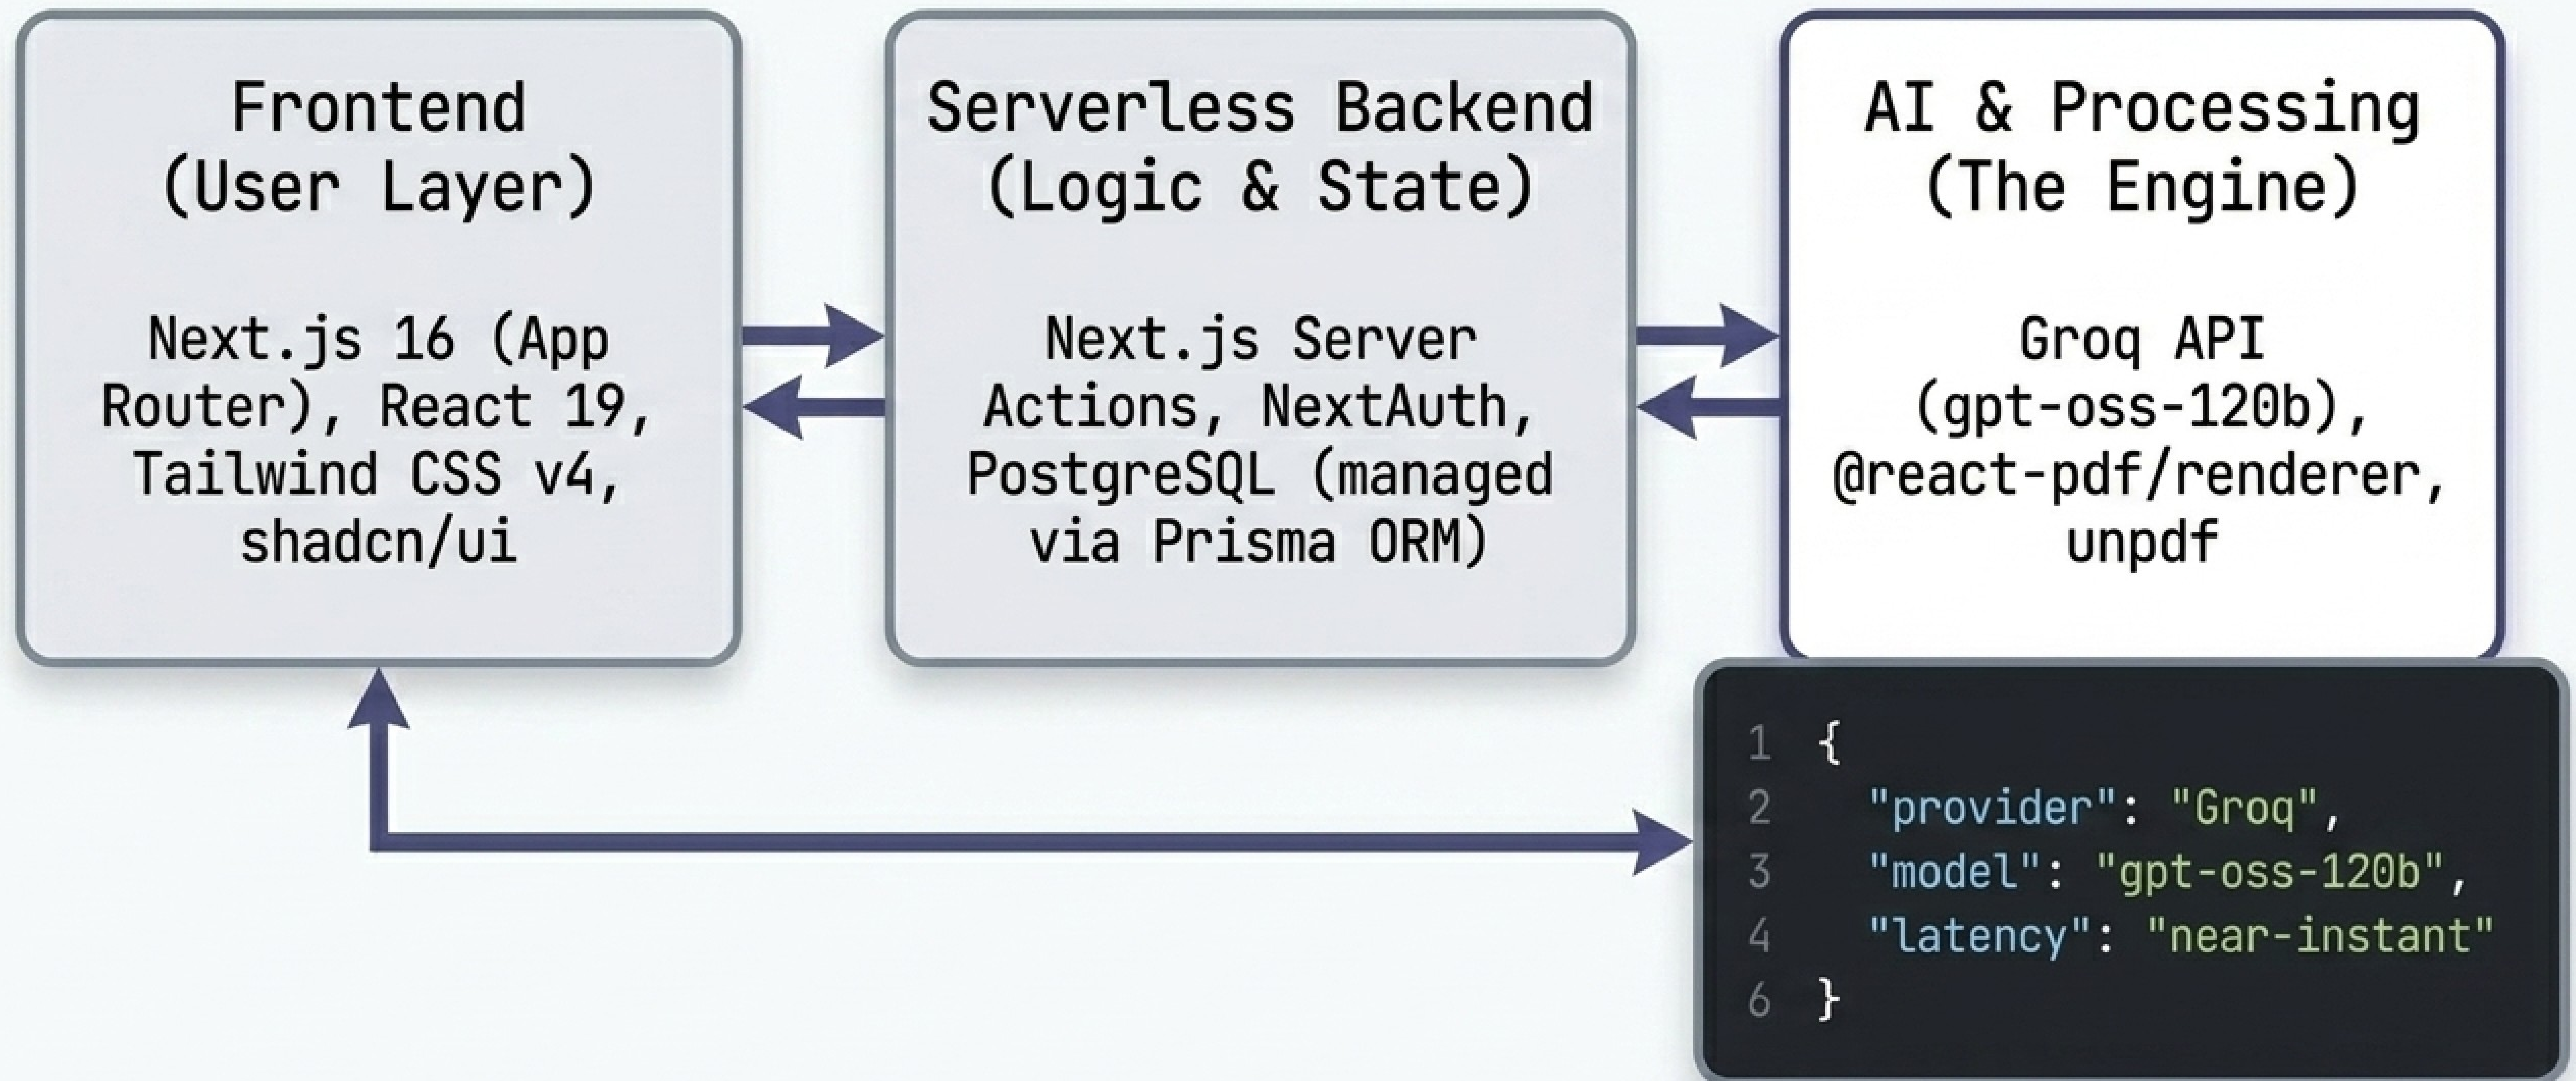

- Format: Persistent, AI-driven career copilot.
- Logic: Deterministic taxonomy mapping and ATS scoring.
- Lifespan: Continuous learning and progress tracking.

GetMeTheJob is not a document formatter; it is an automated career coach.

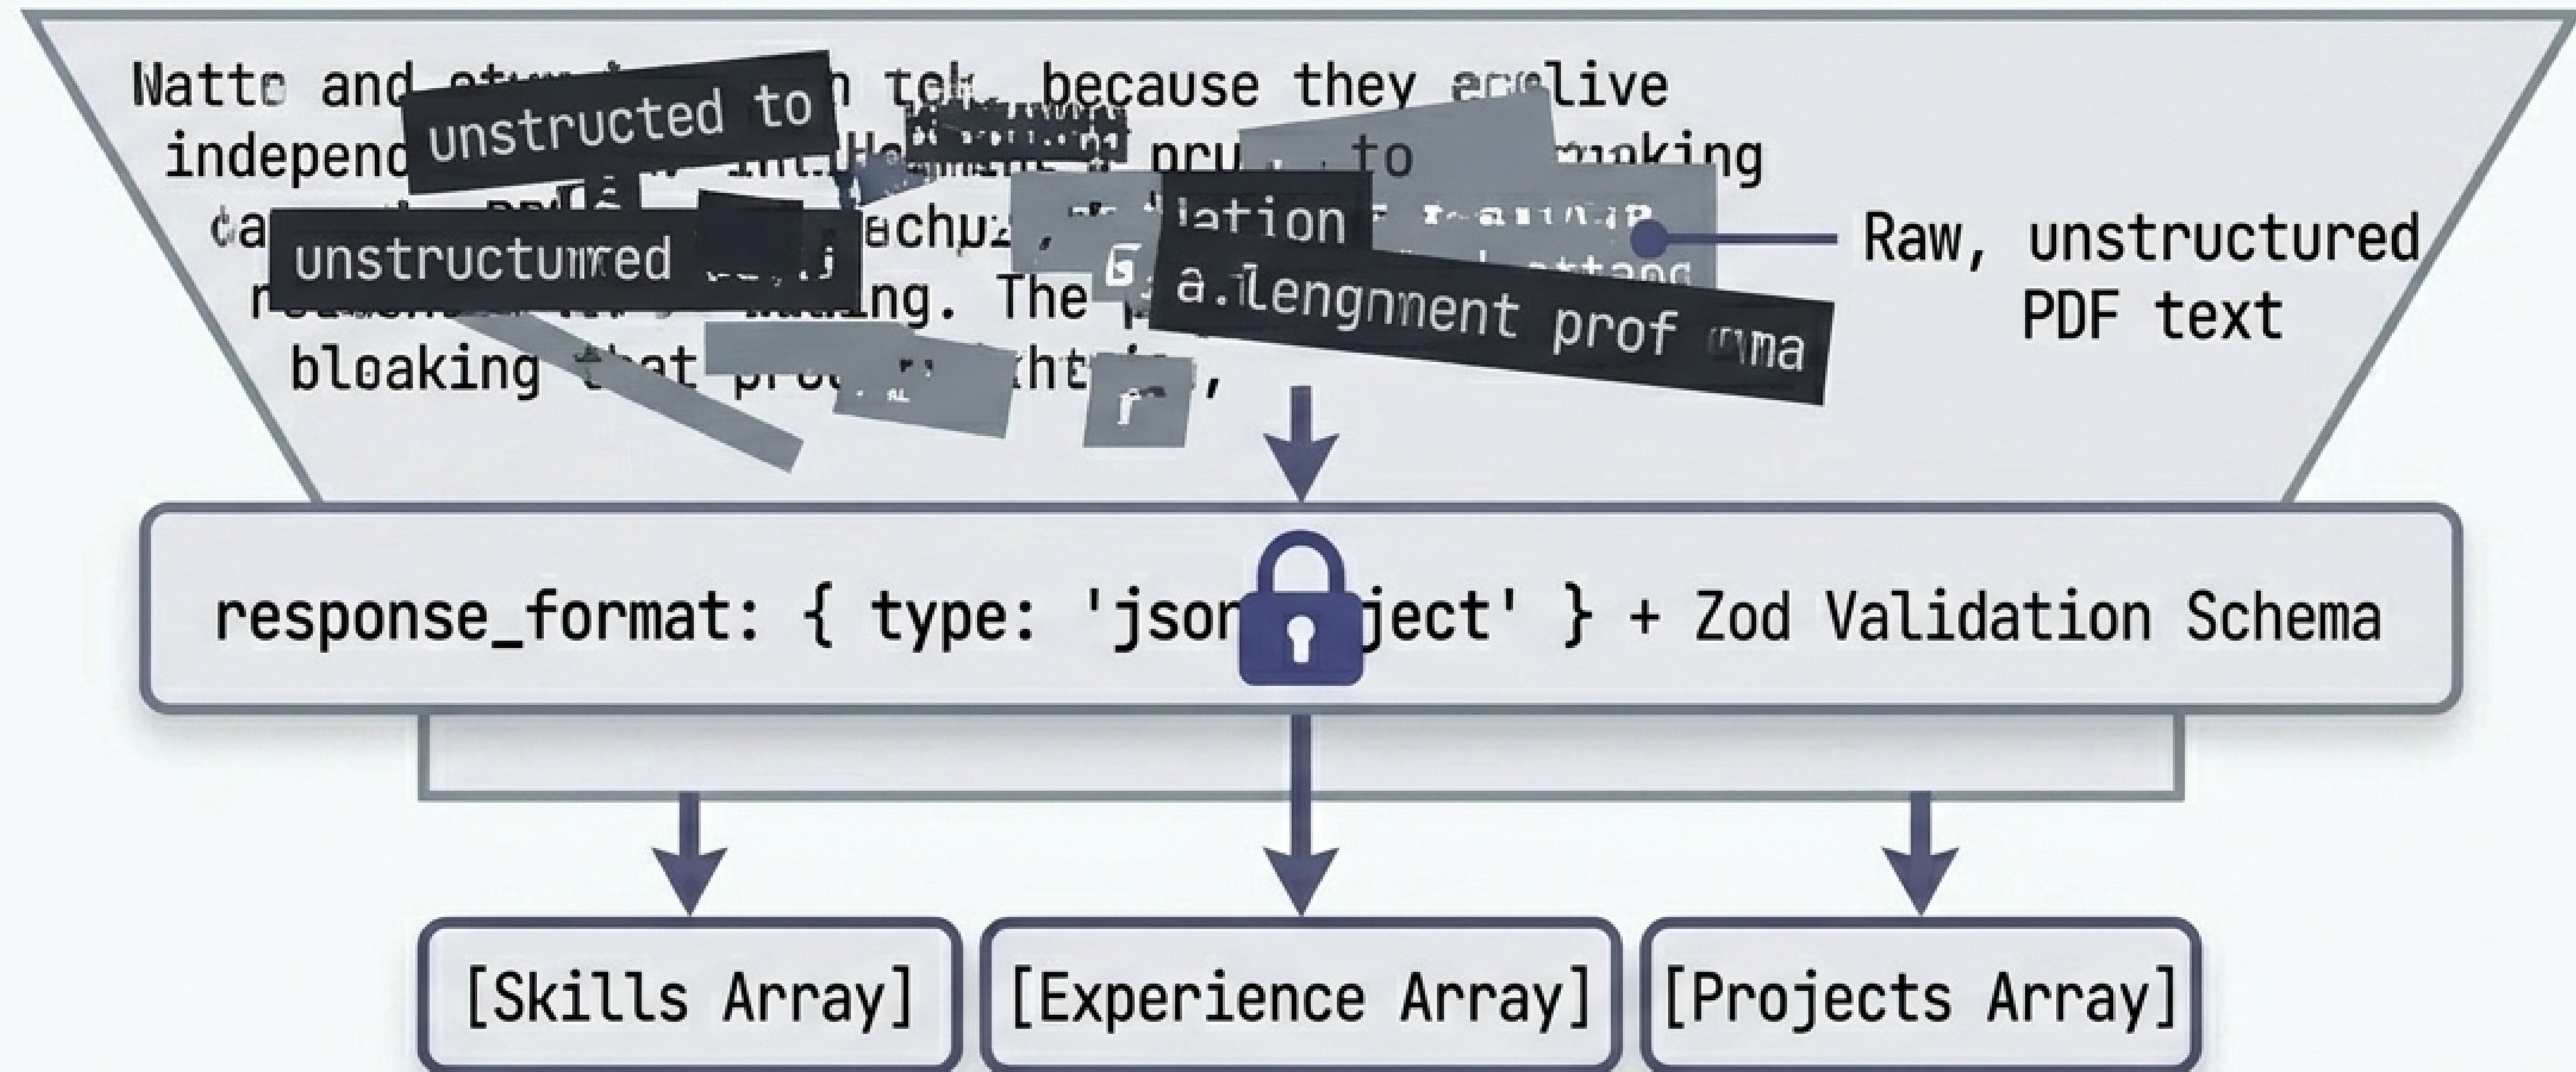

The Automated Feedback Loop

Serverless Architecture Topology

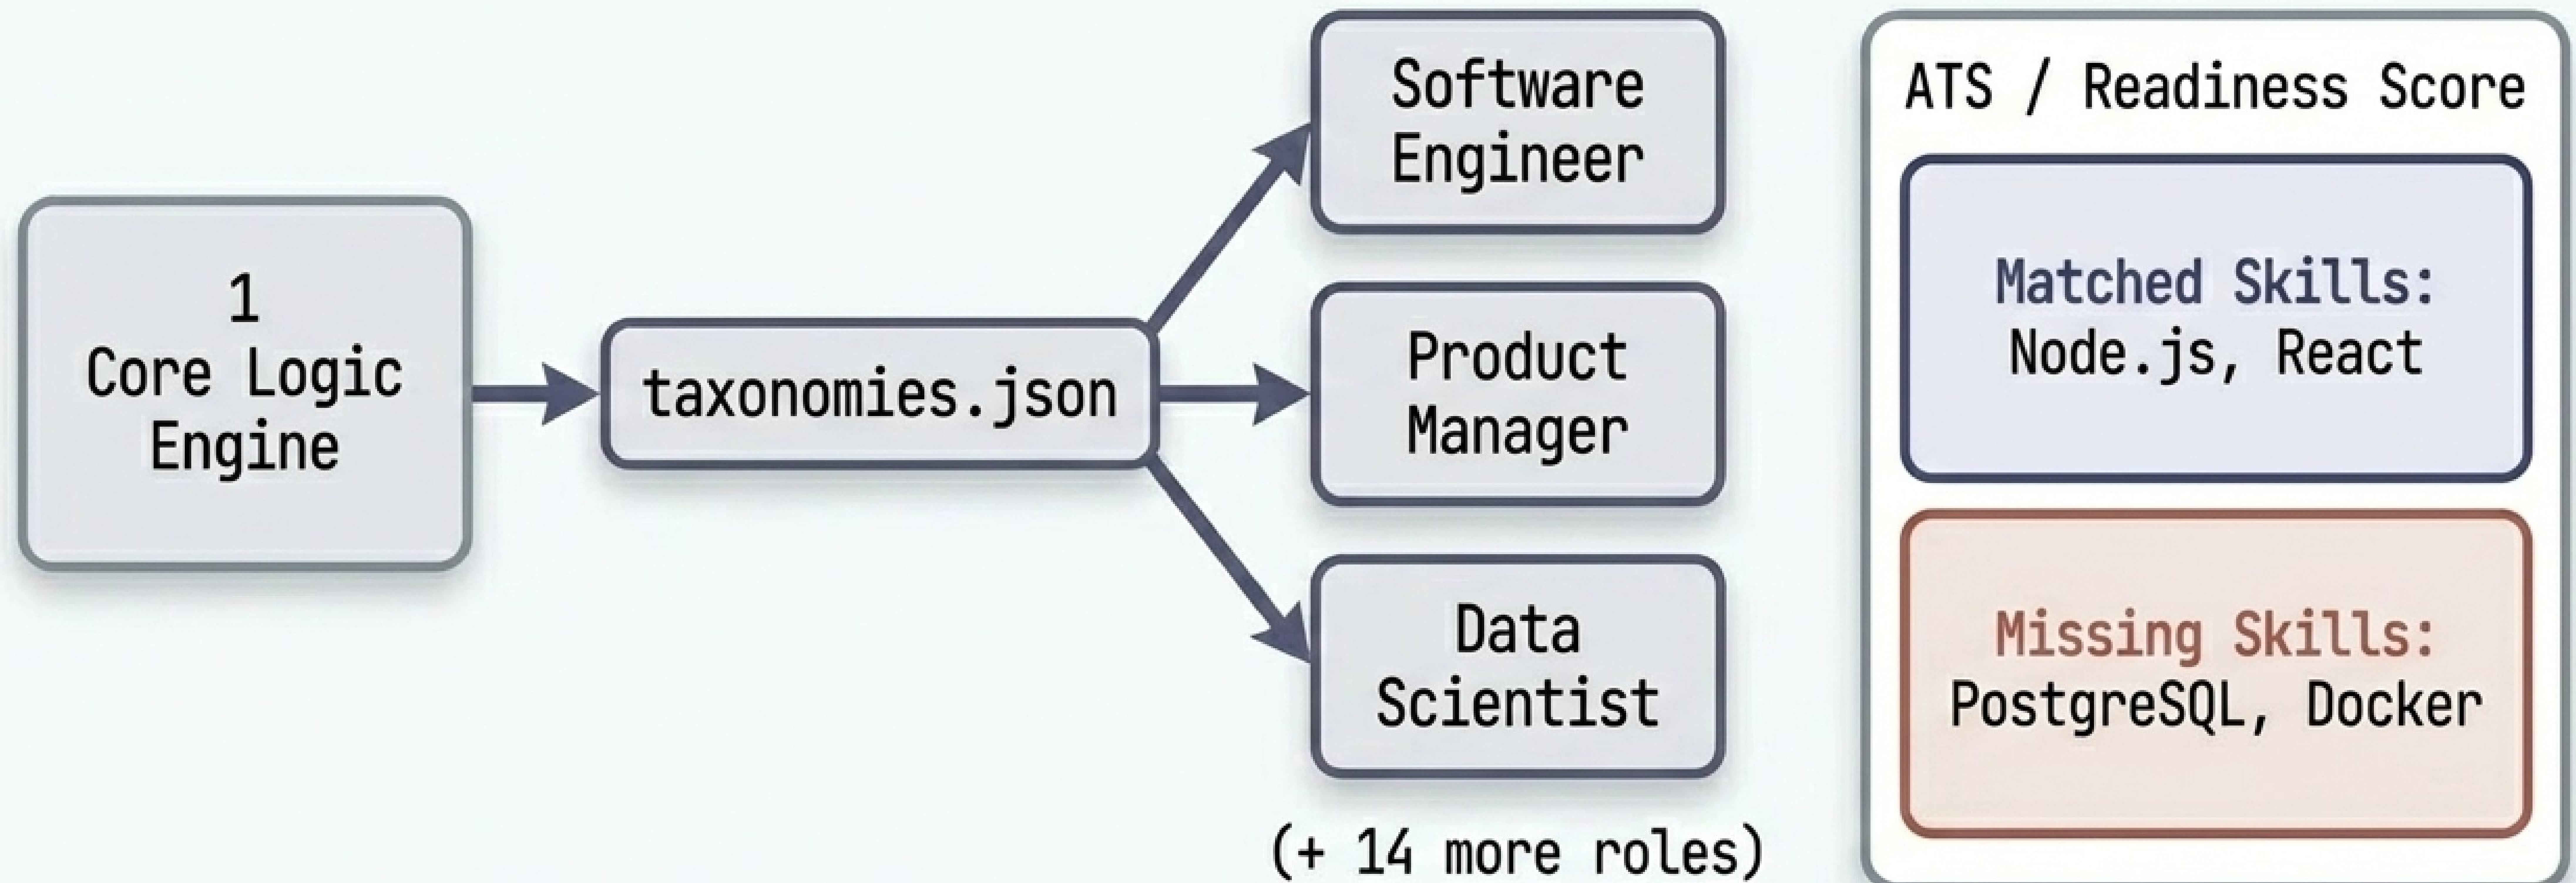

The Deterministic AI Funnel

Challenge: Standard LLMs return conversational text, breaking frontend parsers.
Solution: Strict prompt engineering forced through Zod validation guarantees deterministic, database-ready PostgreSQL schemas.

Taxonomy Scaling via JSON Abstraction

By abandoning hardcoded requirements in favour of an abstraction layer, the platform scales infinitely across industries with zero database migrations.

From Gap Analysis to Actionable Tracking

Missing Skill: React State

Pending

Complete a React state management tutorial

🕒 Frontend • 2 hours

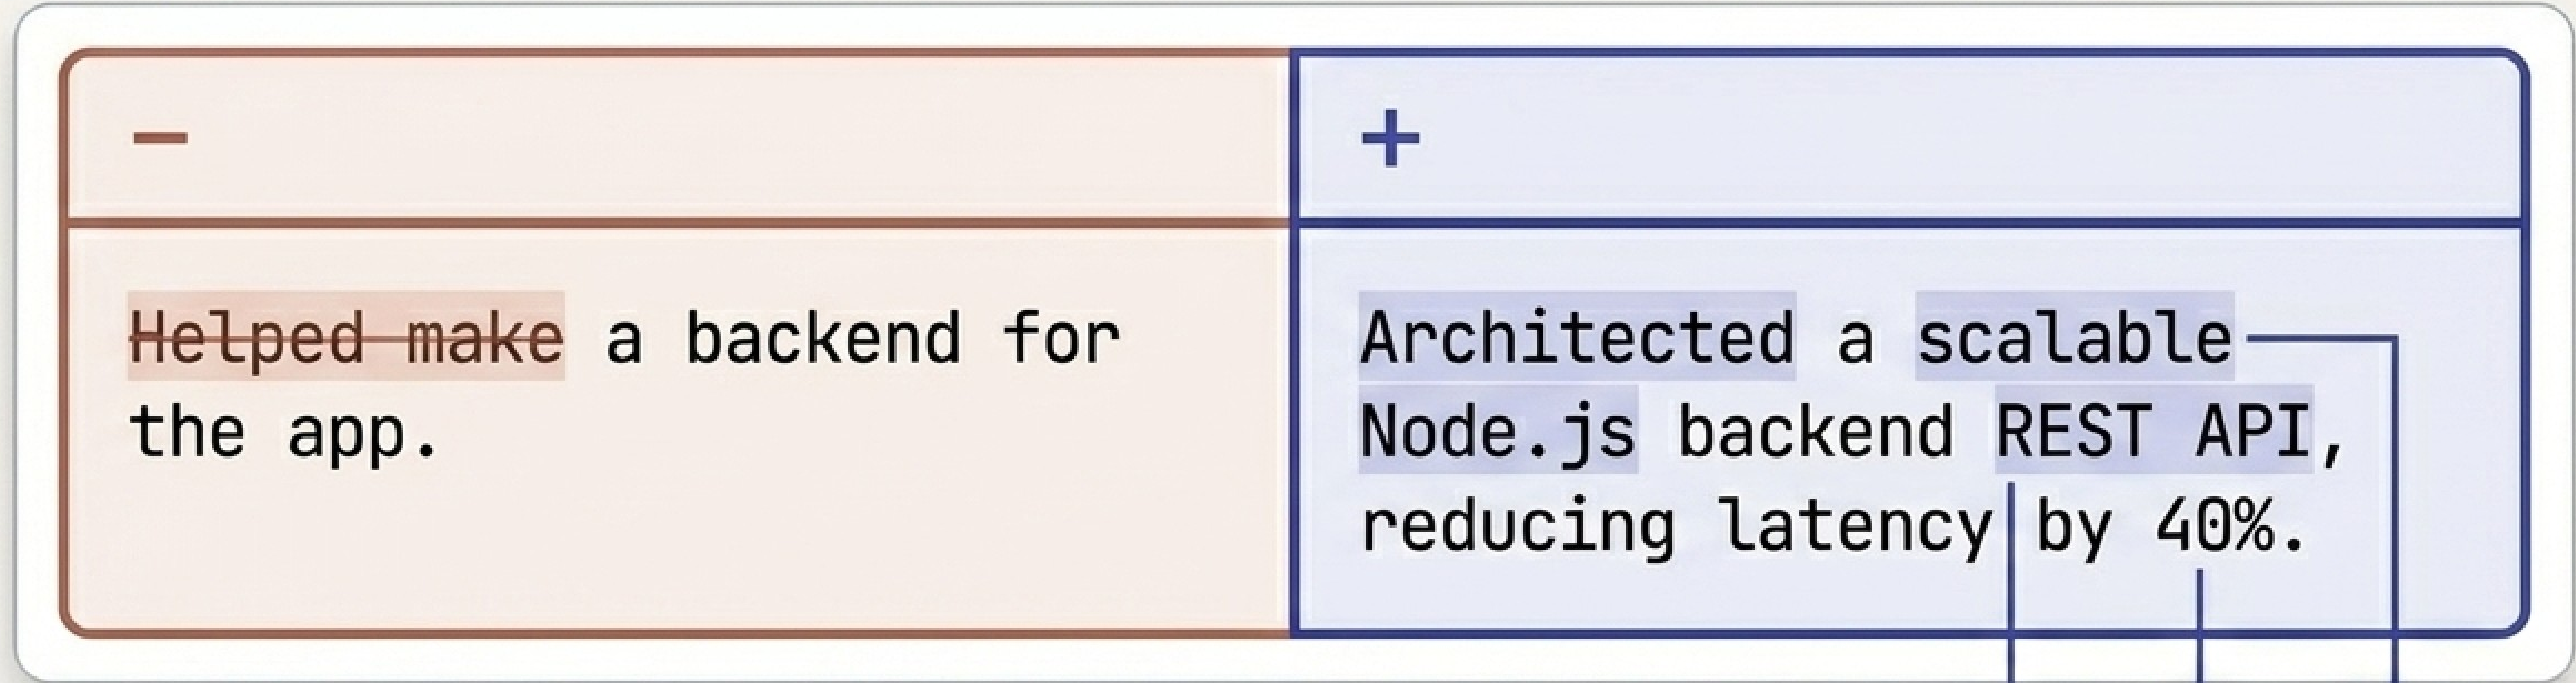

In Progress

Build a REST API in Node.js

Scalable

Defeating Out-of-Memory Leaks in Serverless Parsers

Serverless Memory Management Schematic

Engineering Note: By explicitly invoking memory flushing (`pdf.destroy()`), the system guarantees stability across edge environments without relying on legacy CommonJS internal fs dependencies.

Decoupling State for Layout Stability

Live WYSIWYG React Editor

- Dynamic multi-line contact details, base64 image uploads

Refresh Preview (Manual Trigger)

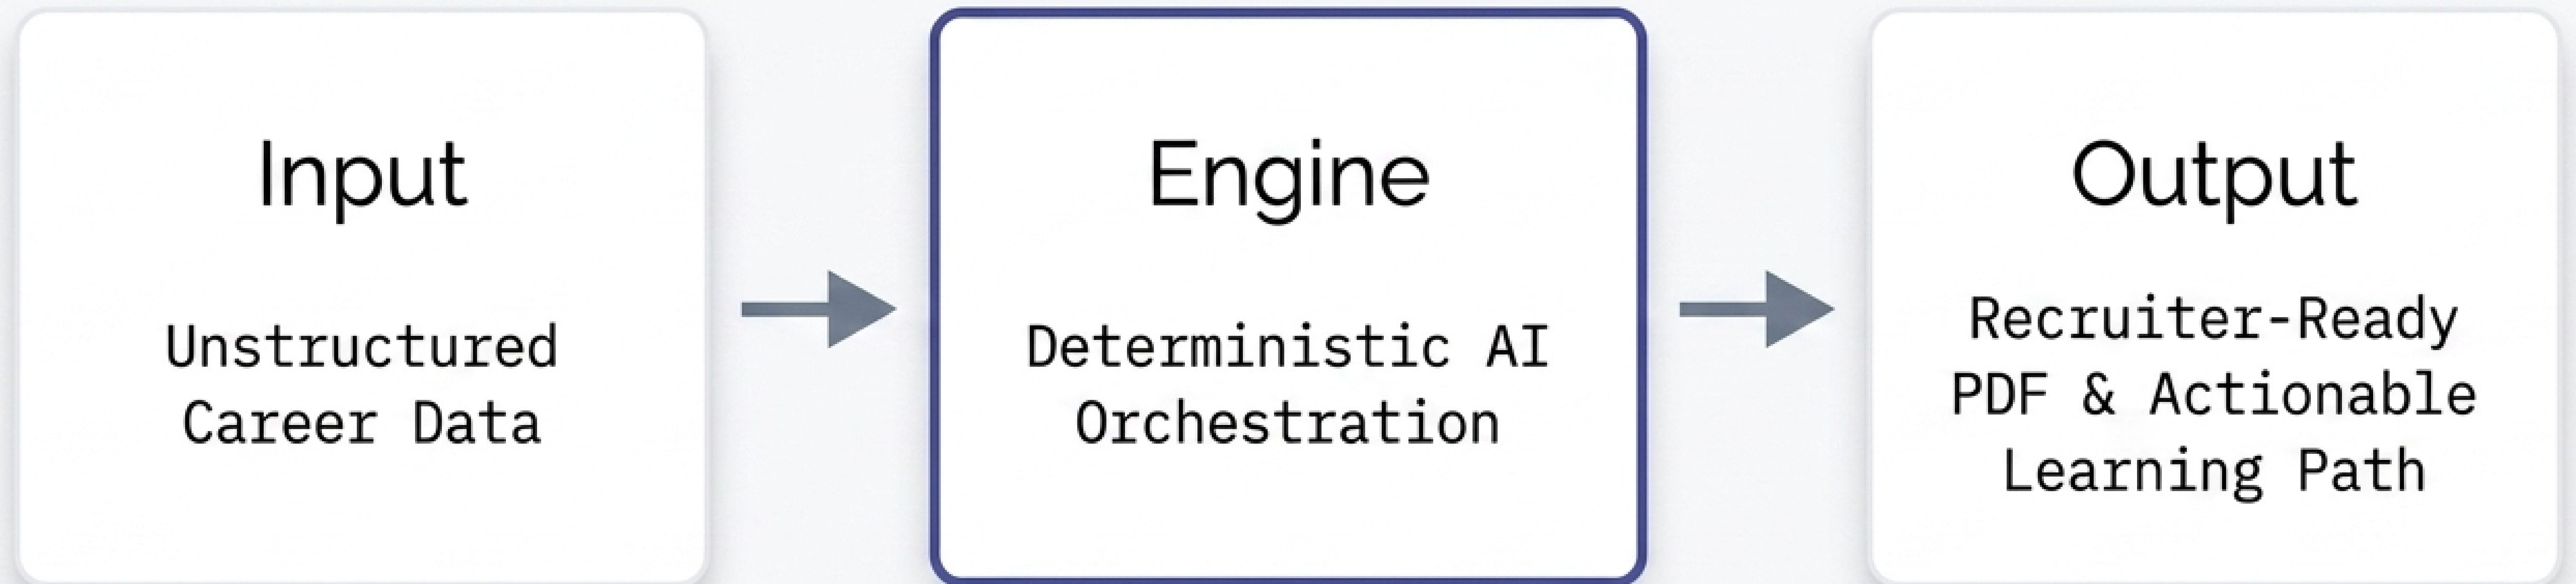

@react-pdf/renderer Yoga flexbox engine

Heavily structured with explicit `<View>` block wrappers

Challenge: Continuous React re-renders caused the Yoga flexbox engine to freeze and page-breaks to overflow.

Solution: Decoupling heavy UI state from the PDF viewer and enforcing explicit structural wrappers.

From Chaos to Actionable Clarity

GetMeTheJob: Engineered by Harshit Gupta.

A comprehensive, scalable, serverless solution to the modern hiring funnel.
